
consequence of the use of bisphosphonates. This study emphasizes that clinicians and researchers need to update their knowledge on bisphosphonate-related ONJ, as its risk factors are still unclear. In summary, the results of our study suggest that the pathogenesis of bisphosphonate-related ONJ may be different from that of the postmenopausal osteoporosis model. We would like to propose that bisphosphonate-related ONJ is caused by local bone fragility that can occur in patients with certain systemic and clinical conditions. Certain systemic and local conditions were associated with this condition, including bisphosphonate use, chemotherapy, smoking, dental disease, multiple alveolar extractions, use of the mandibular corticotomy technique, and bisphosphonate administration in the absence of oral hygiene. Therefore, we should pay close attention to patients with a history of bisphosphonate use, particularly in patients with multiple dental extractions, tobacco use, or a history of bisphosphonate-related osteonecrosis of the jaw. New HIV Type-C: Disease Could Hit U.S. by 2030 By BILL MENGELLA, September 11, 2012 at 12:00 AM The Centers for Disease Control and Prevention said new HIV infections from sex with someone who is thought to carry the new disease, which has no treatment, are expected in the United States by 2030, The New York Times reported Thursday. Forty-six people in the United States have been diagnosed with HIV type-C, the most common new strain of HIV in the United States, the World Health Organization said in a report this month, the newspaper reported. The deadliest outbreak of HIV ever reported began around the year 2000. More than 4,500 people in the United States died from HIV type-C, according to the Times. "At that point, we thought we were winning the war on HIV," said Dr. Robert Grant, a professor of medicine at the University of California, San Francisco, who was part of the team that established treatment guidelines for the new HIV. "However, something had shifted and we had to respond. That's what the C.D.C. and the World Health Organization are doing now," he said. The new government guidelines do not include such therapies as anti-HIV drugs that target the virus when it first enters the body, so the virus can't be stopped with drugs. Instead, the guidelines call for treatment with anti-HIV drugs in order to fight the infection in later stages, the Times reported. The new guidelines are the result of a three-year trial, funded by the government, in which more than 3,000 participants were put

.Iran Is Not Looking Forward To The Day The US Proposes Sanctions On Their Oil, Not Gonna Happen, Mc Lame Ass Speaker Says No 2015-01-12 13:42:15 Iran's Foreign Minister Javad Zarif met with his US counterpart John Kerry in Vienna, and in doing so made clear what has become an increasingly likely eventuality: that the time for negotiating an agreement on the Iranian nuclear deal is drawing to a close. "This deal is not going to be extended," Zarif said, adding that Washington was "unrealistic." For months now, Zarif has been inching closer to what he calls the "truth," which is that the deal is by its very nature unsustainable. "The truth is not only that [sanctions] are not being lifted tomorrow," Zarif said. "They are not going to be lifted next week, and they are not going to be lifted in a month. They are not going to be lifted in a year." That is a different conclusion than the one the US has been drawing since it announced its plans to renew nuclear-related sanctions against Iran. The State Department and US Congress have made it clear that they want to continue gradually easing those sanctions until the Islamic Republic is no longer a nuclear threat. Nonetheless, Zarif has been busy talking tough. Last week he said Iran would resume enriching uranium to the level needed to build nuclear weapons within six months, and he urged foreign companies to cut ties with Iran's petrochemical industry. For her part, the US State Department spokeswoman told journalists on Thursday that Zarif had not spoken with President Barack Obama regarding the prospect of renewed sanctions. In other words, she accused Zarif of lying when he told Kerry that the deal was not going to be extended. But Kerry has long been the Israeli Prime Minister Benjamin Netanyahu's bête noir. In his conversation with Kerry, Zarif once again stated the obvious: that any sanctions relief or negotiation with Washington hinges on the possibility of Israel being able to secure a military solution to the Iranian nuclear crisis. "If, on the other hand, the objective of this conversation is solely to perpetuate the extraterritorial siege on the Iranian people, to perpetuate the economic siege, then I'm afraid that it's not going to
